DAY_02

(Assignment)

1. Reverse a Number

Write a program to reverse the digits of a given number using a loop.
Example: 12345 → 54321

2. Write a program to check whether a given number is a palindrome.

Example: 121 → Palindrome, 123 → Not Palindrome

3. Write a program to check whether a given number is prime or not.

4. Write a program to accept two numbers and print all prime numbers between them.

5. Write a program to accept N integers into an array and find the largest and smallest elements without using built-in sorting methods.

6. Write a program to accept N numbers into an array and calculate their total sum and average.

7. Write a program to accept an array of integers and count how many elements are even and how many are odd.

8. Write a program to accept a matrix and print its transpose.

Example: Rows become columns and columns become rows.

9. Write a program to accept a matrix and calculate the sum of every individual row and every individual column.

10. Write a program to accept N integers into an array and find how many times each element occurs.

Example: 2 3 2 5 3 2 → 2: 3 times, 3: 2 times, 5: 1 time
